

Nursery Tip of the Week

Fertilize

Fertilize Trees - this is very important so the nutrients are available to the tree as it begins spring growth. Use Bluebonnet Farms' Organic 6-2-4 Fertilizer or StaGreen Nursery Special Fertilizer now and fertilize again in 6-8 weeks for vigorous tree growth.

Prune

Prune Summer Flowering Trees - a light pruning will promote new, fresh growth and a fuller look. Use pruning sealer or pruning paint on any large limbs trimmed.

Spray

Spray Fruit Trees - this will help to ward off insects to keep your trees healthy. Products available include Organic Dormant Oil and Neem Spray or Fruit Tree Spray.
